18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ST 25-MAR-2004

Email: seqretégenoscope.cns.fr, Web : www.genoscope.cns.fr, Web : www.genoscope.cns.fr, Web is trand cDNA was primed with a NotI-oligo dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster. For more information about this cluster, see http://www.genoscope.cns.fr/cdna?e=CSODL004CB02QP1&c=250.r.

18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime

end enriched, double-strand cDNA was digested with Not I and cloned

into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library

was normalized. Library was constructed by Life Technologies, a

division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                      EST 30-MAR-2004

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

Email: sequeréfégenoscope.cns.fr. Web : www.genoscope.cns.fr. yeb interest. Sequence cope.cns.fr. Web interest. Sequence cope.cns.fr. web interest. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B96 bp mRNA linear EST 27-APR-2004 BX379273 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA CLONE CSODI032YK05 5-PRIME, mRNA sequence.
